

# Charging Station Template

A **community concern** is that charging stations benefit very few car owners in the area (due to the high cost of EV cars) and a **primary request** is that charging stations have amenities useful to lower-income residents (bench, shade, trash can, wi-fi, and electric scooters/bicycles).

For communities adopting EV, the **ideal template** is to build charging stations with a range of options to purposefully benefit the whole community and address unmet needs. ASPIRE supports the community by asking industry partners to earmark some of their community funds for this purpose, including on-going maintenance.
